

Research & Development Cell

Objectives

The objectives of ARMIET Research & Development (R&D) cell

Innovation: To foster innovation by developing new technologies, products, and processes that benefit people, enhance industrial competitiveness or solve specific challenges.

Problem-solving: To address rural, industrial and organizational challenges through research and development efforts, aiming for practical solutions.

Knowledge creation: To generate new knowledge through scientific research and experimentation.

Promoting Research Culture: Encouraging faculty and students to engage in innovative research activities across disciplines.

Collaboration: Collaborating with other academic institutions, industry partners, and stakeholders to leverage expertise and resources for institute R&D initiatives.

Intellectual Property (IP) Management: Encouraging the filing of patents, research publications, and other intellectual property rights (IPRs) for innovations developed within the institution.

Capacity Building: Enhancing the research skills of students and faculty members through workshops, seminars and training programs.
