

Research & Development Cell

Vision:

- To nurture creativity, innovation and entrepreneurship among faculty and students by conducting cutting-edge research in specific Applied Sciences, Engineering and Technology thrust areas and supporting the design and development of product and industrial processes.

Mission:

- To conduct both basic and applied research of a high standard and global nature through an interdisciplinary approach and initiative to make significant contributions to society at local, regional, national, and international levels.
- To take initiative and make policy to support research and development for the present needs of the society, including the rural population.
- To expand the growth of knowledge, technology and skills in our country and keep pace with the fast developments around the globe.
